

PRODUCT INFORMATION SHEET

10 x 10 Canopy Top

Water resistance and weather-protection information

PRODUCT DESCRIPTION

The canopy is described as using durable 600D polyester material with a rust-resistant aluminum frame, designed for repeated outdoor event use.

WATER & WEATHER RESISTANCE STATEMENT

Built with waterproof 600D polyester and rust-resistant aluminum, these tents are described as providing protection against rain, wind (20-28 mph), and UV exposure. The canopy is intended to help protect people and promotional materials while maintaining its structure and printed appearance during typical outdoor conditions.

Important use note

Water resistance does not mean the canopy should be left unattended in severe storms or extreme weather. Proper anchoring, setup, and site-specific safety precautions are still required.

Weather-protection features

- 600D polyester canopy material
 - Designed to resist rain and outdoor moisture
 - Rust-resistant aluminum frame
 - UV exposure protection for outdoor use
 - Wind resistance statement: 20-28 mph when properly secured
-
